## Postdoctoral Position

### *Mechanisms of stress storage and dissipation during flow of soft jammed materials*

The Soft Matter & Photonics Group at the Physics Department of the University of Fribourg / Switzerland has an opening for a Postdoctoral Fellow to study shear induced solid / fluid transitions in soft jammed materials.

The University of Fribourg hosts several groups working in the field of soft matter, providing a wide range of experimental facilities and knowhow. The postdoctoral researcher will closely collaborate with research groups from the University of Milan and Vienna, as well as Georgetown University and Procter & Gamble.

The position is funded through the Swiss National Science Foundation, and is available starting April 2021 or later.

The candidate is expected to have a PhD in physics or physico-chemistry and ideally would be familiar with rheometry and imaging techniques.

Applications comprising a motivation letter, a detailed CV and names of references, all in one PDF should be send to:
